                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        /dew_stage="gametocyte (stage III-V)"
/lab_host="DH10B (GeneHog, Invitrogen, Inc.)"
/lab_host="DH10B (GeneHog, Invitrogen, Inc.)"
/note="Vector: pBluescript SK plus; Site_1: EcoRI; Site_2:
XhoI; The library was constructed by R Haywood. cDNAs were
synthesized from ganetocyte poly(A)+ RNA by oligo d(T)
prinning, size-selected and directionally cloned into the
EcoRi (5' end) to XhoI (3' end) sites of the Uni-Zap XR
lambda vector (Stratagene). The primary library was mass
excised as phagemid using the ExAssist helper phage
(Stratagene). Clones were mass excised using the ExAssist
helper phage (Stratagene), the phagemids were precititated
with PEG 8000 and extracted with phenol/chloroform.
Phagemid DNA was electroporated into DH10B cells. Clone
Availablilty: David Sibley, Washington University."

/note="Vector: pAD-GAL4; At 20-25% parasitemia, blood was collected from BALB/CByJ mice infected with Pyl7xL parasites, and leukcoytes removed by passage over microcrystalline cellulose removed by passage over microcrystalline cellulose collumns. Total RNA was isolated using the guanidinium isothicoyanate method, and mRNA isolated using oligo(dT)-cellulose chromatography. First strand cDNA synthesis was completed using a 50-base primer and reverse transcriptase in the presence of 5-methyl dCTP. After second strand synthesis, uneven termini were treated with Pfu DNA polymerase and EcoRI adaptors ligated to the blunt ends. The sample was cleaved with XhoI and separated on a Sephacryl S-500 column. Size-fractionated cDNA was precipitated and ligated to HybrizAP arms directionally using EcoRI-XhoI cleaved arms. After packaging, the phagemid vector (pAD-GAL4) was excised from the HybriZAP vector and plasmid DNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    289
